

Course > Persist... > Modul... > Mod03... Mod03 Assessment Question 1 1/1 point (graded) What are the three components in CAP theorem? coverage, abstraction and permissions consistency, availability and partition cost, availability and partition cost, availability and partition clusters, atomization and portability You have used 1 of 1 attempt Submit ✓ Correct (1/1 point) Question 2 1/1 point (graded) What command will launch a MongoDB server locally on port 27017? mongodb start mongodb mongod

2/2010	Modus Assessment Module 3 Assessment DEV263X Courseware edx
o mongo	0
o mongo	pui
Submit	You have used 1 of 1 attempt
✓ Correc	ct (1/1 point)
Question	n 3
1/1 point (gra	ided)
What Mong	oDB shell/REPL command will update MongoDB document?
O db.co	<pre>intracts.update({name:"Lease Agreement"},{leasee:"Node University"});</pre>
O db.co	<pre>intracts.update({name:"Lease Agreement"},{leasee:"Node University"}, function(error, result) {});</pre>
● db.co	ntracts.update({name:"Lease Agreement"},{\$set:{leasee:"Node University"}});
O db.co	ntracts.updateByName("Lease Agreement",{\$set:{leasee:"Node University"}});
O db.co	<pre>intracts.update({name:"Lease Agreement"},{\$update:{leasee:"Node University"}});</pre>
Submit	You have used 1 of 1 attempt
✓ Correc	ct (1/1 point)
Ouesties	n 1
Question	
1/1 point (gra	nded)

```
"_id": "56b2ac41065598d78bd5366f",
 "id": "EBA956EE-57C1-4265-A2AC-06CB83ED39F4",
  "first_name": "Mariquilla",
  "last_name": "Van't Hoff",
  "email": "mvanthoff0@merriam-webster.com",
  "gender": "Female",
  "ip_address": "243.135.104.124",
  "bitcoin_address": "149bHNMLDm5bzpjJdKX8UybwUj9X2DLMtg",
  "company name": "Agivu"
}
```

Give the document above exists in your MongoDB collection users of 1000+ documents, which REPL statement will find it? (Choose two that apply)

db.users.find({id: "EBA956EE-57C1-4265-A2AC"}); db.users.findById("EBA956EE-57C1-4265-A2AC-06CB83ED39F4"); db.users.find({id: "EBA956EE-57C1-4265-A2AC-06CB83ED39F4"}); db.users.find({id: "EBA956EE-57C1-4265-A2AC-06CB83ED39F4", gender: "Female", first_name: /Mar/}); db.users.find({bitcoin_address: "149bHNMLDm5bzpjJdKX8UybwUj9X2DLMtg"}); Submit You have used 1 of 1 attempt

Question 5

1/1 point (graded)

✓ Correct (1/1 point)

How can a developer use MongoDB (save, find, update, remove documents) in his/her Node program?

By using mongo command By using mongod command By using mongodb npm module By using MongoUI GUI tool

By using npm scripts You have used 1 of 1 attempt Submit ✓ Correct (1/1 point) Question 6 1/1 point (graded) /var/www/credit-score /node_modules /routes profile.js history.js index.js /views 404.pug 500.pug package.json index.js app.js Give the project structure above, what is the proper way to install MongoDB native Node.js driver from project root /var/www/credit-score? (Choose two that apply) npm i -SE mongodb cd var/www/credit-score && npm i mongodb npm i -E mongodb cd /var/www/credit-score && npm instal mongodb npm i mongod You have used 1 of 1 attempt Submit ✓ Correct (1/1 point)

Question 7

1/1 point (graded)

```
const insertDocuments = (db, callback) => {
 const collection = db.collection('etherium_wallets')
 if (error) callback(error)
  console.log(result)
  response.send(result)
 })
}
```

Give the code above, what are the problems if any? (Choose three that apply)

- Not calling callback when there's no error
- Not stopping execution when there's an error
- response might be undefined
- console.log must be removed
- No semicolons

Submit

You have used 1 of 1 attempt

✓ Correct (1/1 point)

Question 8

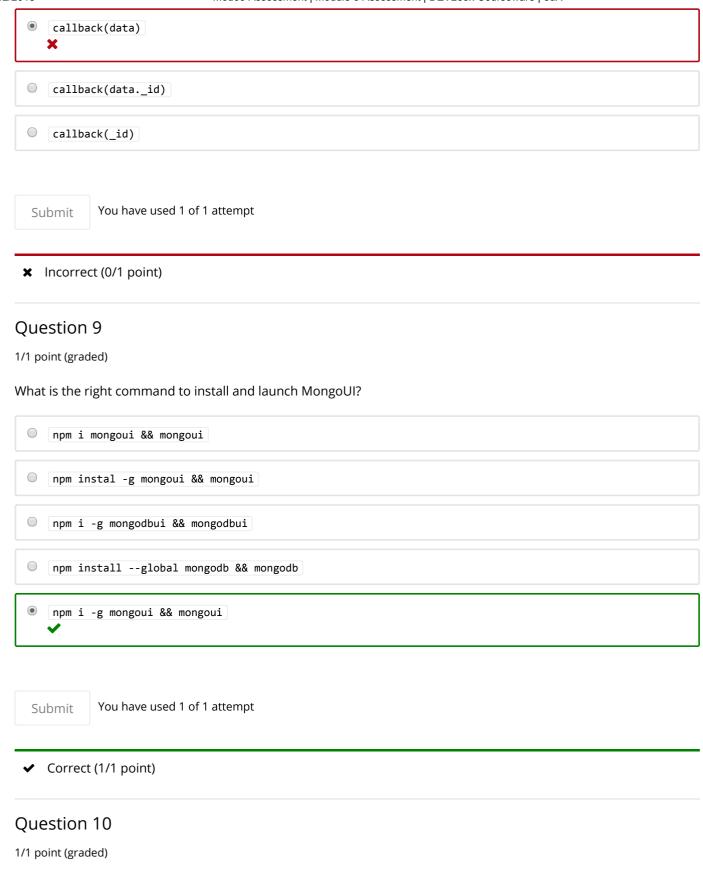

0/1 point (graded)

```
const updateDocument = (db, data, callback) => {
 var collection = db.collection('transactions')
 collection.update({ _id : data._id }, { $set: data }, (error, result) => {
   if (error) return process.exit(1)
    //TODO
 })
}
```

Please complete the function by choosing the right code in place of "TODO"

```
db.send(result)
```

callback(result)

```
const updateDocument = (db, data, callback) => {
   var collection = db.collection('transactions')
   collection.update({ _id : data._id }, { $set: data }, (error, result) => {
     if (error) return process.exit(1)
     //TODO
   })
 }
What is the right way to convert the string id to a MongoDB ObjectID in mongodb native driver?
      require('mongodb').ObjectId(id)
      require('mongodb').ObjectID(id)
      ObjectId(id)
     ObjectID(id)
     id.ObjectID()
              You have used 1 of 1 attempt
   Submit
 ✓ Correct (1/1 point)
